Examiner's Detailed Office Action

1. Claims 1-21 & 26-32 are allowed.

REASONS FOR ALLOWANCE

2. The following is an Examiner's statement for reasons for allowance:
3. Claims 1-21 & 26-32 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claim(s).
4. The limitations recited in independent claim 1 “... the device being operable with a first automatic rule handler automatically executing said rules to control the behavior of the apparatus, the tangible system, or the machine according to a predetermined program for the rule handling, wherein each rule to control the behavior of the apparatus, the tangible system, or the machine includes at least one configurable premise having a plurality of states and at least one configurable conclusion that specifies a behavior to be performed when the at least one configurable premise is in a particular state, the device being operable with a second rule handler which enables a user, by instructions via said second means, to control the behavior of the apparatus, the tangible system, or the machine as an alternative to a behavior of the apparatus, the tangible

system, or the machine that is to be carried out according to a rule in the set of rules that are automatically executed by the first rule handler, such that the second rule handler is activated and executes the rule in the set of rules with the alternative to the behavior in accordance with said instructions from the user at the same time that the first rule handler continues the automatic execution of the other rules in the set of rules to control other behavior of the apparatus, the tangible system, or the machine, the device being further operable such that said first means at the same time is able to present information concerning the rule handling which is carried out by the first rule handler and the rule handling which is carried out by the second rule handler.”

5. The limitations recited in independent claim 22 “... a first automatic rule handler automatically executing rules to control the behavior of an apparatus a tangible system, or a machine according to a predetermined program for the rule handling, wherein each rule to control the behavior of the apparatus, the tangible system, or the machine includes at least one configurable premise having a plurality of states and at least one configurable conclusion that specifies a behavior to be performed when the at least one configurable premise is in a particular state, and a second rule handler which enables a user, by instructions via a second means, to control the behavior of the apparatus, the tangible system, or the machine as an alternative to a behavior of the apparatus, the tangible system, or the machine that is to be carried out according to a rule in the set of rules that are automatically executed by the first rule handler such that the second rule handler is activated and executes the rule in the set of rules with the alternative to the behavior of the apparatus, tangible system, or machine in accordance with said instructions from the user at the same time that the first rule handler continues the automatic execution of the other rules in the set of rules to control other behavior of the apparatus, tangible system, or machine,

wherein a first means at the same time is able to present information concerning the rule handling which is carried out by the first rule handler and the rule handling which is carried out by the second rule handler.”

6. The limitations recited in independent claim 27 “... a first automatic rule handler automatically executing rules to control the behavior of the apparatus, the tangible system, or the machine according to a predetermined program for the rule handling, wherein each rule to control the behavior of the apparatus, the tangible system, or the machine includes at least one configurable premise having a plurality of states and at least one configurable conclusion that specifies a behavior to be performed when the at least one configurable premise is in a particular state, a second rule handler which enables a user, by instructions via a second means, to control the behavior of the apparatus, the tangible system, or the machine as an alternative to a behavior of the apparatus, the tangible system, or the machine that the second rule handler is activated and executes the rule in the set of rules with the alternative to the behavior in accordance with said instructions from the user at the same time that the first rule handler continues the automatic execution of the other rules in the set of rules to control other behavior of the apparatus, the tangible system, or the machine, a first means at the same time is able to present information concerning the rule handling which is carried out by the first rule handler and the rule handling which is carried out by the second rule handler.”

7. When taken in context the claim(s) as a whole, were not uncovered in the prior art. Moreover, the dependent claims 2-21, 26 & 28-32, are allowed as they depend upon an allowable independent claim(s).

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments regarding Statement of Reasons for Allowance."
